Advanced Direct Injection Combustion Engine Technologies and Development H Zhao 2009-12-18 Volume 2 of the two-volume set Advanced direct injection combustion engine technologies and development investigates diesel DI combustion engines, which despite their commercial success are facing ever more stringent emission legislation worldwide. Direct injection diesel engines are generally more efficient and cleaner than indirect injection engines and as fuel prices continue to rise DI engines are expected to gain in popularity for automotive applications. Two exclusive sections examine light-duty and heavy-duty diesel engines. Fuel injection systems and after treatment systems for DI diesel engines are discussed. The final section addresses exhaust emission control strategies, including combustion diagnostics and modelling, drawing on reputable diesel combustion system research and development. Investigates how HSDI and DI engines can meet ever more stringent emission legislation Examines technologies for both light-duty and heavy-duty diesel engines Discusses exhaust emission control strategies, combustion diagnostics and modelling

Japan's Industrial Technology Development Yoshitaka Okada 2012-12-06 Japan's technology support system has played a crucial role in developing firms technological capability and stimulating their innovation. How has it been done, and why is it effective? The research findings presented here show that what has worked best in Japan is inter-firm cooperative learning, which requires the support of public technology institutions to promote cooperation, disseminate technology, and facilitate innovation. Among the many books published about Japanese technology policies and corporate management, this is the first to show definitively that cooperative learning is important in a wide spectrum of firms, whether or not they are keiretsu-affiliated. With a caveat on the limitations of the Japanese system from an institutional perspective, the countrys techno-governance structure is revealed to be more effective in assembly-oriented industries than in those that are basic-science oriented and employ rapidly changing technology.

Global Business Strategy Kazuyuki Motohashi 2015-03-25 This book presents theories and case studies for corporations in developed nations, including Japan, for designing strategies to maximize opportunities and minimize threats in business expansion into developing nations. The case studies featured

here focus on Asia, including China and India, and use examples of Japanese manufacturers. Five case studies are provided, including Hitachi Construction Machinery and Shiseido in China and Maruti Suzuki in India. These cases facilitate the reader's understanding of the business environments in emerging economies. This volume is especially recommended for business people responsible for international business development, particularly in China and India. In addition, the book serves as a useful resource for students in graduate-level courses in international management.
